How to install Arch Linux?

1. Official minimal guide likely for pro : https://wiki.archlinux.org/title/User:Alad/Beginners%27_guide
2. Detailed best guide for noob like me : https://www.freecodecamp.org/news/how-to-install-arch-linux/
3. Another one not much cool : https://itsfoss.com/install-arch-linux/
4. Use archinstall (Easiest way)

How to Connect the KeePassXC Password Manager to LibreWolf in Linux?

> Credit : https://t.me/LinuxTechIndex

LibreWolf is NOT one of the browser options in KeePassXC, so you need to add it's connection manually.

1. Create a .mozilla folder in your home folder if it doesn't exist.

   ```
   mkdir ~/.mozilla
   ```

2. Open KeePassXC, and go to

   ```
   Tools
     ->Setting
       ->Browser Integration
   ```

3. Check the "Firefox" checkbox

4. Click "OK" button. This creates this file

   ```
   org.keepassxc.keepassxc_browser.json
   ```

   in this folder

   ```
   ~/.mozilla/native-messaging-hosts
   ```

5. Create the native-messaging-hosts folder inside the .librewolf folder in your home folder.

   ```
   mkdir -p ~/.librewolf/native-messaging-hosts/
   ```

6. Copy the org.keepassxc.keepassxc_browser.json file from the .mozilla folder to the .librewolf folder

   ```
   cp ~/.mozilla/native-messaging-hosts/org.keepassxc.keepassxc_browser.json ~/.librewolf/native-messaging-hosts/
   ```

7. Open LibreWolf, and follow these instructions for setting up KeePassXC in LibreWolf https://keepassxc.org/docs/KeePassXC_GettingStarted.html#_setup_browser_integration
