The Ultimate Twitter Client

Revanced Twitter + TwiFucker = VanFucker

1. Build Revanced Twitter through a builder of your choice. (Recommended : reisxd)

   - Apply 'Dynamic Colors' 'Monochrome Icon' patches and leave out the 'Hide Timeline Ads' one to avoid any potential conflicts.

- Rename the apk to twitter.apk

2. Download the latest TwiFucker apk from GitHub

3. Download LSPatch .JAR from GitHub

4. Keep all the files in the same directory.

5. Building the VanFucker

   - Make sure Java is installed on your PC/Mac/Linux/Termux
   - cd into the directory with files.
   - Run `java -jar lspatch.jar twitter.apk -m twifucker-V.x.apk`
   - That's it.
6. Install the APK generated to enjoy VanFucker

USAGE : After logging in, go to "Settings and Privacy" > "Additional Resources" > Tap on the version number (top of the list). You'll be presented with the TwiFucker Menu where you can customise these features to your wish.
